A complete Digital Media Management Solution (DMMS) that streamlines and enhances an organization's ability to store, view and manage digital evidence. Providing FileOnQ users with an integrated, powerful and secure “new way” to manage and view their digital evidence like never before.

Dedicated Video & Image Evidence Management Solution

**Securely and Dynamically Search & View Video | Images**

Easy to use search tools allow you to query digital evidence by name, case number, type, date, photographer, any metadata field and more. Stop spending hours combing through CDs and DVDs searching for something. Now you can dynamically view all images (and video, or a single video) related to a case, in a detailed thumbnail view with simple one-click preview access.

**Images Imported From Camera with Original Metadata**

DigitalOnQ verifies that imported images came from their original source and discovers duplicate files that may already be in the system. All images are imported with their original Metadata created at the moment the image was captured, such as camera make/model, date/time taken, camera settings, image size, GPS location, and more. Maintain full image integrity throughout its entire evidence lifespan.

**Import Media Directly From Storage Sources**

No matter how or where your digital media resides – CDs, flash drives, external hard drives, servers, or others sources – we provide you the flexibility to easily import large volumes of archival, current and future media data into the system. DigitalOnQ allows you to group or associate your evidence into categories that fit your processes.

**Easily Burn & Archive Video/Images to CD/DVD**

Quickly and easily select images of video to be burned to DVD/CD with a few clicks. DigitalOnQ makes sure no copy of images are left on local hard drive, and verifies that the burned media guaranteed working copy.

**Fully Integrated with FileOnQ | EvidenceOnQ**

Store all your evidence in one place. Investigators, prosecutors and others can view both physical evidence records and digital media evidence from one platform. There’s no need to utilize two systems, or to request CDs or DVDs to review videos or images related to a case. One-click access to the DigitalOnQ repository provides a complete evidence solution.

**Significant Time & Cost Savings**

Significantly reduce the labor and material costs associated with outdated methods of managing your digital evidence…downloading from memory cards; burning to expensive and trouble-prone CDs and DVDs; packaging, book and storing discs as physical evidence; and later making copy discs just to permit viewing. Gain significant savings in staff-hours that can pay for the system and more within the first year.

**Images Imported From Camera with Original Metadata**

**100% Security, Accountability, Reliability & Integrity**

DigitalOnQ provides a 100% SWGIT compliant and secure repository for all images, video and other forms of digital evidence. Image authentication processes are built-in, so original images are always preserved and are tamper-proof. Enhancement tracking shows any edits, processing modifications, or movements made to any media type.
